**DETAILED ACTION**

***Election/Restrictions***

1. Claims 10-13 and 15-18 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected control system, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 12/14/2006.
2. Applicant's election of species 5 in the reply filed on 12/14/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

*or*

4. Claims 7-9, and 14 rejected under 35 U.S.C. 102(b) as being anticipated by Izumi 4,606,313. Izumi teaches all the limitations of the invention substantially as claimed for a method of controlling the angle of a swashplate of a hydrostatic unit having a swash plate, 4 and/or 5, and steps including: generating an electric signal, 13a and/or 13b, based on a set point signal, 8a and/or 9a, receiving the electric signal in a microprocessor (col. 10 ll. 65-68, col. 11 ll. 1-3), interpolating the information from the electric signal using an algorithm contained in the microprocessor, 12 and 13 (col. 9 ll. 1-8), sending an output signal, 13a and/or 13b, from the microprocessor, 12 and 13 (col. 9 ll. 1-8), to a pressure control, 24a and/or 25a,

dithering the output signal 31; and generating a dithered pressure from the pressure control that displaces the swash plate (col. 5 ll. 53-65); a method wherein the set point signal is generated by measuring an operational parameter (col. 8 ll. 34-39); a method wherein the operational parameter is the angle of the swash plate 4a; and a method wherein the pressure control is a flapper nozzle style pilot valve with one boost spool (col. 5 ll. 56-62). See particularly Figures 1, 3.
